

GEBERIT BIM PLUG-IN

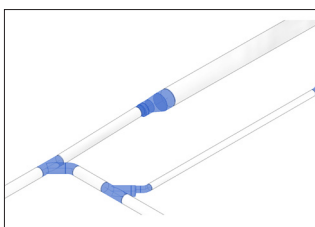

LATEST FUNCTIONS & IMPROVED FEATURES

RELEASE OCTOBER 2025

The latest release of the Geberit BIM plug-in is now available for download. Once the update is ready, users will be notified directly in the software via a pop-up message.

This edition of our newsletter gives you a clear overview of the most important enhancements across modules — designed to make your planning faster, smarter, and more precise.

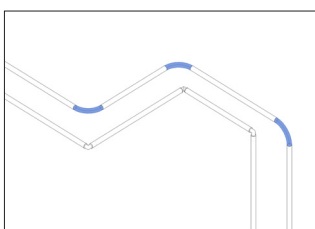

CATALOGUE MODULE HIGHLIGHTS

SMARTER FITTINGS WITH NESTED FAMILIES

Standard fitting arrangements are now automatically generated through intelligent nested families. By integrating these elements into routing preferences, the system creates all required configurations without manual steps.

This will provide a faster workflow, fewer errors and smoother design process.

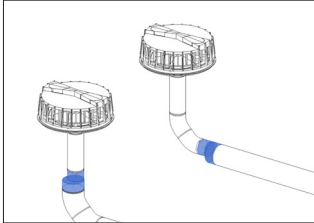

MORE FLEXIBILITY WITH SUPPLY BENDS

Supply Systems now support bendable pipes that can be included in the material list. This improvement reduces dependency on fittings, resulting in more efficient and cost-effective planning.

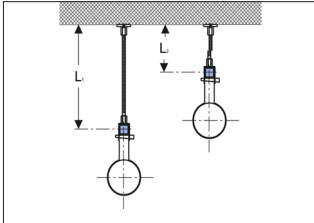

MATERIAL LISTS FOR SPECIFIC PIPE SECTIONS

Users can now generate material lists for selected sections instead of the entire system. Ideal for renovation projects since you only focus on relevant sections.

FLEXIBLE REDUCTION PLACEMENT

Higher accuracy by flexible placement of pipe reduction. In projects where space is limited, the reduction fitting can now be positioned exactly where needed (on the vertical or horizontal pipe right after an outlet). This reduces manual adjustments to material lists and ensures higher project accuracy.

LENGTH DEFINITION OF THREADED RODS FOR INDIVIDUAL PIPES

By defining multiple structure distances at the pipe level, users can generate more accurate fastening lists. This optimizes threaded rod calculations and cutting lengths, resulting in more efficient material planning.

GET THE UPDATE NOW

Take advantage of these improvements today by downloading the latest version of the Geberit BIM plug-in. The update is available directly within the software — just follow the notification prompt to install.
